

Biotech`s Dictionary of Forestry

By Meena Francis (Ed.)

Biotech Books/Daya Publishing House, 2006. Hardcover. Book Condition: New. The most valuable assets of our planet are forests. The importance of forests in our ecology has made them useful for human beings. It is believed that Homo erectus used wood for the fire at least 7,50,000 years ago. Forestry pertains to the science of developing and managing the woodlands, along with all the resources of forests. The earliest know instance of organised reforestation was recorded in Germany in 1368, and by the mid 18th century. The 20th century has seen the steady growth of national forests laws and policies designed to protect the woodland, making the forestry an inevitable natural industry for the living bring. Biotech`s Dictionary of Forestry presents extensive information regarding various terms related to forest science. The enhancements in theories and concepts over the past years of discoveries and researches have given way to new terms. The present volume provides information regarding all new and old terms related to forestry. Printed Pages: 312.
